LENTIS® intraocular lenses for every visual demand

As varied as the patients are the treatment options offered with LENTIS® intraocular lenses by Teleon. We provide the optimal intraocular lenses for the individual needs and personal preferences regarding visual acuity for every patient and every physician. Choose between standard, convenience and premium intraocular lenses.

STANDARD - LENTIS®

Implantation of a standard IOL is the best possible cataract treatment for those who do not mind wearing glasses after their surgery; however, it is not the best possible solution for those who wish to become more independent from their spectacles. This means: Despite successful cataract surgery, the patient will still need to use very special and costly glasses. But: For patients who do not feel disturbed by a visual aid, a standard LENTIS® IOL is still the right choice.

CONVENIENCE - LENTIS® Comfort

The specific design of the LENTIS® Comfort lens allows for an outcome of cataract surgery which goes far beyond the results achieved with the standard lens implant. This lens is perfectly tailored for the patient not only to regain best possible far vision (as provided by standard cataract surgery) but to achieve improved intermediate vision as well. This means more independence from spectacles in the long run. Not only those patients working on the computer but also those carrying out craft activities performed beyond the reading distance will benefit thereof. In short: A comfort lens solution in everyday situations for the demanding cataract patient!

PREMIUM - LENTIS® MplusFamily

Premium intraocular lenses surpass the visual results achieved with standard lens implants by far. These IOL can correct common irregularities associated with the focusing power of the eye, known as refractive errors e.g. astigmatism or presbyopia. Premium-IOL are the multifocal LENTIS® Mplus^X, the toric LENTIS® Tplus^X and the multifocal-toric LENTIS® Mplus^Xtoric. These lenses are individually manufactured for your patients, guaranteeing high spectacle independence at all distances.

Consulting

We will support you with advice and practical help regarding the efficient use of all our intraocular lenses. Do not hesitate to contact us and to order more informational materials regarding our products and services.
