intraocular lens
for cataract patients

LENTIS[®] Comfort

Dear Patient,

nowadays no one needs to be visually impaired because of a cataract. Modern ophthalmology has excellent options for removing cataracts quickly, painlessly and permanently. By treatment with a LENTIS® Comfort intraocular lens a new visual comfort can be achieved which goes far beyond the standard solution!

The LENTIS® Comfort fulfills the desire for more quality of vision in everyday situations, such as the daily computer work, shopping or driving a car.

Available as LENTIS® Comfort Toric lens for the correction of astigmatism!

The easy lens solution for you,

**if you are looking for more
than the standard treatment.**

Standard

Good distance vision
Reading glasses and varifocals necessary

The easy lens

and potential outcome

solution for you

Implantation of a monofocal standard lens is a possible cataract treatment for those who do not mind wearing glasses after their surgery; however, it is not the best solution for those who wish to become more independent from their spectacles.

The unique optics of LENTIS® Comfort are adjusted optimally to the intermediate range and thus have been successful in meeting the demanding needs that most patients have with the results of cataract surgery.

Comfort

Very good distance and good intermediate vision
In some cases reading glasses might be necessary

Illustrative image
to simulate expected
and potential outcome

The LENTIS® Comfort offers both good intermediate as well as distance vision, due to its advanced technology.

This is especially of importance to patients who want greater spectacle independence in everyday situations, such as using the computer, handling their smartphone, shopping or driving.

In short: The possible
lens solution for
everyday situations!
