

HIGH SPECTACLE INDEPEN- DENCE FOR A BETTER QUALITY OF LIFE

Advanced premium
intraocular lenses
for the treatment
of cataract and
presbyopia

LENTIS[®] Mplus

Dear Patient

Today, modern ophthalmology can fulfill your understandable desire to enjoy everyday life again without the support from spectacles.

Besides the traditional standard intraocular lenses your ophthalmologist also offers „lenses with extra benefits“, that correct presbyopia in addition to cataracts.

Please note that in all cases, always the instructions of your ophthalmologist are significant and you should follow it accordingly.

**With LENTIS® Mplus
premium intraocular lenses:
More freedom from glasses
for a better
quality of life!**

What is Presbyopia?

It is the natural human lens that manages accommodation of the eye, i.e. the process to change the point of focus from a near object to a distant object.

Presbyopia is characterised by a gradual loss of flexibility of the natural lens progressing with age.

The accommodation ability of the eye will be reduced continuously. However, this elasticity of the lens is mainly needed for near vision.

The hardening of the natural lens will lead to a loss of near vision over the years.

What does Presbyopia mean to me?

Everyday activities – such as reading, working on the computer or using your mobile phone – will become more and more taxing on the eye.

Therefore, it may become necessary to wear spectacles or contact lenses in order to see clearly while reading.

However wearing and using spectacles could inevitably lead to a restriction in everyday life.

Modern lens surgery

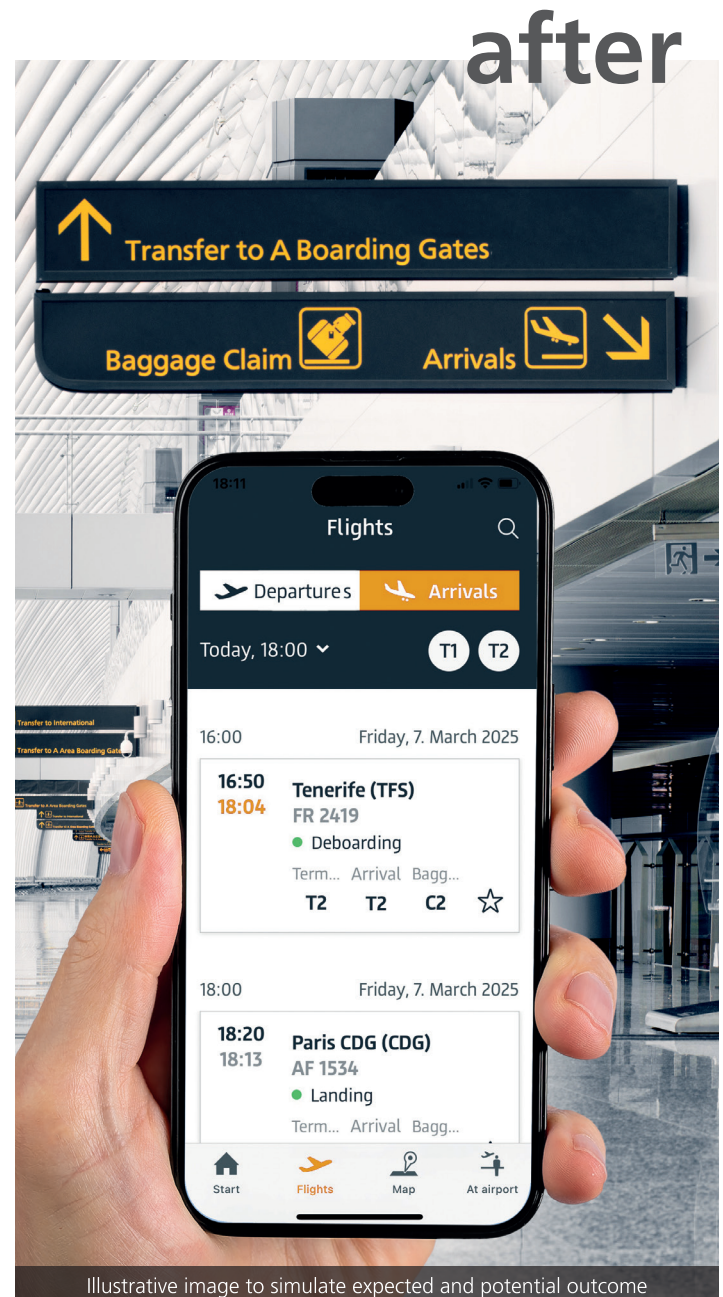

Modern ophthalmology makes it possible to correct presbyopia during one single routine surgery by replacing the natural lens of the eye with a modern lens implant.

The implantation of a multifocal intraocular lens can correct presbyopia and provide the patient with a high degree of spectacle independence* for distance, intermediate, and near vision.

The result:

More spectacles independence* for a better quality of life!

*Clinical studies have confirmed a very high degree of spectacle independence.

The plus for you. LENTIS® Mplus

Your advantages:

- More spectacle independence for a better quality of life!
- This multifocal intraocular lens enables good vision for distance, intermediate and near ranges.
- Everyday activities such as reading, using your mobile phone, shopping, working on the computer and active leisure activities such as cycling, driving and other types of fitness and sport are possible with this multifocal intraocular lens almost spectacle independent.
- For patients suffering from presbyopia and additional astigmatism, a multifocal toric intraocular lens offers the possibility to correct both visual impairments simultaneously. Consult your ophthalmologist!
- Clinical studies attest this multifocal intraocular lens a high patient satisfaction!
